

Between the Lines Online Book Study

Participant Feedback:

*Studying this book by Jim Popham was very informational and helped me to better understand formative assessment and the way it should look not only in my classroom but school and district wide. Discussing the book with other professionals was very helpful and it really helped me to analyze what I was learning.— **Shelbi Wagner, PVSD***

*It was a great experience doing the online book study and I look forward to participating in other book studies that CTLT offers. I really enjoyed hearing other people's opinions about the book and getting to chat with the author.— **Jennifer Adams, PVSD***

*After reading the book, "Transformative Assessment," I see a number of ways I can incorporate formative assessment in my classroom.— **Sue Kitchell, PVSD***

Serendipity is such a wonderful gift when it connects answers to questions and expands the understanding of an idea into a concept. It was pure chance that I checked my school email and saw the flyer for this course. Being part of this book conversation about Formative Assessments was the gift that connected the pieces from Transforming Students into Learners (TSiL), and fleshed out the ideas into a broader concept.

*The book study played an important part in my developing competency with Formative Assessments but the conversations from the study were vital to my skill development for implementing the process. Essential questions were asked, opinions were considered, and I was forced to reflect, something I have learned is an important part of owning my new learning. What luck, a transformed learner!! - **Clare Schoolmaster, BVSD***
